How to create a database

- Search for and run PGAdmin. Click on Servers, then PostgreSQL
- You may be asked for a password – postgres1
- Right click on Databases and choose create
  - o Name your database (lower case)
  - o Save
- Database will now appear under the Databases tab
- Go to DBVisualizer to run your scripts to create tables and load data

How to delete your database

- Remove your database connection from DBVisualizer
- Log into PGAdmin
- Find your database and right click on the name and choose delete
-
